AA21 didn't pay prefund

You arenot using a paymaster, but thesender address did not have enough native tokens to cover the gas costs associated with the user operation.

Possible solutions

- If you arenot
- using a paymaster, verify that thesender
- address has enough native tokens to cover the required prefund. Consider leveraging functions likegetRequiredPrefund
- .

```

constrequiredPrefund=getRequiredPrefund({ userOperation })

constsenderBalance=awaitpublicClient.getBalance({ address: userOperation.sender })

if(senderBalance<requiredPrefund) { thrownewError(Sender address does not have enough native tokens ) }

```

- If you are looking to use a paymaster to cover the gas fees, verify that thepaymasterAndData
- field is set.

```

constuserOperationHash=awaitbundlerClient.sendUserOperation({
paymasterAndData:"0x3b912be0270b59143985cc5c6aab452d99e2b4bb000000000000000000000000000000000000000000000000000000000000000064c0957400000000000000000000000000000000000000000
...,// the rest of the user operation })

```
