

This proposal outlines the introduction of eight new assets to GMX V2.

These listings will proceed until the Listing Committee is fully established; from then on, the Listing Committee will take over.

The asset selection is driven by data from Chainlink DataStreams, community feedback, liquidity, and overall trading volumes on both centralized and decentralised exchanges.

The proposed new assets include: SUI, TIA, TRX, APT, SEI, TON, BONK, WLD

\$229.1M

\$1.3B

This proposal approves both synthetic and backed pools to be prioritized based on feedback from Chaos and the security committee.

Furthermore, if the DAO deems it desirable, any synthetic markets for these assets under consideration will be integrated into the GMX Liquidity Vault (specifically, GLV: WETH-USDC).

Please note: as always, the actual listing of these assets will depend on the provision of initial market parameters by our Risk Assessment partner [@chaoslabs](#).
