[Vora Labs](#) is a gaming & interactive experience studio powering web3 & beyond. Our flagship web3 project is [@vora_xyz](#) - Made By Apes #00382

. We're psyched to be a part of Thank APE's Built By ApeCoin Accelerator Program and have some cool things we're working on for the ApeCoin community!

We joined the Yuga Labs ecosystem right around the Otherside mint in 2022. The founders have worked together for over a decade, including an art-gaming studio that we ran a while back that produced early Facebook & iOS games. After going down the web3 rabbit hole we about the future of art & gaming and found the inspiration to launch Vora Labs.

Vora Labs is a small team that punches above its weight class. Since our launch we've brought multiple activations & minigames to market, including Flappy Koda, DashBored, and several Fortnite maps. We're also proud of the various pieces of lore that we've created, including comics, motion comics & 3D animations. Our project has also incorporated multiple IPs from the Yugaverse, including BAYC, Kudas and Mutant Hounds. Last, but not least, our most recent Fortnite map exceeded was played by over 100K unique users and close to 2 million minutes played.

As a part of our ApeCoin Giveback Initiative for the BBAC program, we're going to implement a new level in DashBored called Milli vs. the Rolling Bones

. Anyone will be able to access this level, and those who have at least 1 ApeCoin and defeat the Rollings Bones will receive a limited edition Milli (based on BAYC #2338

) 3d avatar that's MML-ready and compatible with MSquared & Otherside.
