

The post is being created as a place for the community to collect their thoughts and discuss the listing of new assets on GMX v2 and the feasibility.

I think as a must the token suggestions should be a token with consistently high trading volume (stats for which can be found on coingecko) and be available through [Chainlink Data Streams](#).

A good rough format for making a suggestions could be as follows for example:

Token: Ticker

30d Daily Average Volume: \$x

Available on Chainlink Data Streams: Yes/No/Unsure

Native/Synthetic Pool: Native/Synthetic

Chain: Arbitrum/Avalanche
