

Verifying Contracts

The contributor-operated block explorer at <https://oklink.com/canto/> supports contract verification, allowing you to share your smart contracts' source code, methods, and ABIs with users and developers through the explorer itself.

Another 3rd-party operated block explorer at <https://canto.dex.guru/> supports smart contract verification with a native UI for Sourcify.

Verifying with Sourcify

At present, the explorer only supports contract verification via Sourcify. To verify a contract, follow these steps:

1. Navigate to the contract you would like to verify on the Canto block explorer.
2. On the Code
3. tab, click Verify & Publish.
4. Select verification via Sourcify and click Next.
5. Import or upload your project's source files and metadata.
6.
 - For Hardhat, include the JSON file located at artifacts/build-info
7.
 - /
8.
 - For Truffle, include the JSON file located at build/contracts/
9. *
10. Click Verify & publish.
11. The contract will become verified within several minutes.
- 12.

You can also verify contracts through the [Sourcify website](#) . For more information on how to do so, as well as guidelines on how partial matches, libraries, and more are handled, see the [documentation](#) .
