

Neofinance Coordinator

This protocol does not have a user interface. To be eligible for and claim incentives, supply cNOTE to whitelisted third-party lending markets such as [Vivacity Finance](#). Neofinance Coordinator is a minimal protocol which incentivizes supplying cNOTE on third-party lending markets on the Canto blockchain. Within the protocol, CANTO is sourced from chain governance and distributed according to a vote locking mechanism.

Architecture

Neofinance Coordinator consists of three smart contracts:

[VotingEscrow](#)

Allows users (typically protocols) to lock CANTO for a fixed 5-year period. In exchange for locking, users receive veCANTO which provides gauge voting rights.

[Canto Address 0x2fed...75F57C](#) | [Blockchain Explorer](#) | [OKLink](#) [OKLink](#)Mainnet deployment

[GaugeController](#)

Allows lockers to vote on gauges, which are liquidity pairs on Canto's third-party lending markets. Voting takes place during one week epochs, after which CANTO incentives are allocated to pairs proportionally to votes.

[Canto Address 0x4697...18C2b8](#) | [Blockchain Explorer](#) | [OKLink](#) [OKLink](#)Mainnet deployment

[LendingLedger](#)

Holds incentives received from Canto governance and continuously tracks balances on whitelisted third-party lending markets, allowing liquidity providers to claim incentives proportionally to their balance at a given epoch.

Additionally, implements a view third-party lending markets can use to distribute secondary token rewards.
