Description

Returns NFT sales that have happened through on-chain marketplaces.

Parameters

Name Type Description options object The optional parameters to use for the request.

options

parameters

parameter type description fromBlock number The block number to start fetching NFT sales data from, e.g., latest . toBlock number The block number limit to fetch NFT sales data from. latest order string Whether to return the results in ascending or descending order by block number. ASCENDING = asc , DESCENDING = desc . marketplace string The NFT marketplace to filter sales by. Examples are [SEAPORT = seaport , LOOKSRARE = looksrare , X2Y2 = x2y2 , WYVERN' = wyvern , 'CRYPTOPUNKS' = cryptopunks , UNKNOWN = unknown buyerAddress string The address of the NFT buyer to filter sales by. sellerAddress string The address of the NFT seller to filter sales by. taker string Filter by whether the buyer or

seller was the taker in the NFT trade. Defaults to returning both buyer and seller taker trades. Available options are: [BUYER = buyer , SELLER = seller]. limit number The maximum number of NFT sales to return. pageKey string Key for pagination to use to fetch results from the next page if available.

Response

Property Type Description Promise object Returns the NFT sales that have happened through on-chain marketplaces.

GetNftSalesResponse

object properties

Property Type Description nftSales array of objects List of NFT sales that match the query. validAt object Block Information of the block as of which the corresponding data is valid. Includes the following properties:

- blockNumber : The block number the sale information is valid at. - blockHash : The block hash. Used to detect reorgs. - blockTimestamp : The timestamp for the block. pageKey string The page key to use to fetch the next page if more results are available.

nftSales

properties

Parameter Type Description marketplace string The marketplace the sale took place on. Currently, tracked marketplaces are Seaport, Looksrare, X2Y2, Wyvern, Blur, and Cryptopunks. For all other marketplaces, this field is unknown. marketplaceAddress string This is the NFT marketplace address, which is the same as the contractAddress . contractAddress string The NFT contract address. tokenId string The decimal token ID of the NFT being sold. quantity string The number of tokens sold in the sale as a decimal integer string. buyerAddress string The address of the buyer in the NFT sale. sellerAddress string The address of the seller in the NFT sale. taker string Whether the price taker in the trade was the buyer or the seller. sellerFee object The payment from the buyer to the seller. The parameters in this object include: amount :string , symbol :string , decimals :number . protocolFee object The payment from the buyer to the marketplace.

The parameters in this object include: amount :string , symbol :string , decimals :number. royaltyFee object The payment from the buyer to the royalty address of the NFT collection. The parameters in this object include: amount :string , symbol :string , decimals :number. blockNumber number The block number the NFT sale took place in. logIndex number The log number of the sale event emitted within the block. bundleIndex number The index of the token within the bundle of NFTs sold in the sale. transactionHash string The transactionHash of the NFT sale.

Example Request and Response

Prerequisite : You will need to install the Alchemy SDK before making requests with it.

The commands for installing it using npm or yarn are given below:

```
npm yarn npm install alchemy-sdk@latest yarn add alchemy-sdk@latest
```

Request

```
index.js // Imports the Alchemy SDK const {Alchemy ,Network} = require ("alchemy-sdk");// Configures the Alchemy SDK
const config = {apiKey : "alchemy-replit" ,// Replace with your API key network :Network .ETH_MAINNET ,// Replace with your network };// Creates an Alchemy object instance with the config to use for making requests const alchemy = new Alchemy (config );const main = async ()=> {//Call the method to return the nft sales data const response = await alchemy .nft .getNftSales ()//Logging the response to the console console .log (response ) };main ();
```

Response

```

Code Sandbox

You can test out the getNftSales method using the code sandbox below:

Use Cases

Here are some potential use cases for the getNftSales method:

- NFT market analysis
- : By using
- getNftSales
- , users can retrieve data about the sales of various NFTs on the blockchain network. This data can be used to analyze market trends and understand the popularity of specific NFTs. Investors and traders can use this information to make informed decisions about buying or selling NFTs.
- Royalty calculation
- : NFTs often include royalty clauses that enable creators to receive a percentage of the sale price every time the NFT is sold.
- getNftSales
- can be used to retrieve information about all the sales of a specific NFT, allowing creators to calculate their royalty payments accurately.
- Proof of ownership
- :
- getNftSales
- can be used to verify an NFT's ownership by checking its sales history. This can be helpful in cases where the ownership of an NFT is disputed or when verifying the authenticity of an NFT.
