Verite Project (Github[Link](#))

)

The primary packages in this repository are:

- [verite](#)
 - The core Javascript SDK for issuing, verifying, and revoking Verifiable Credentials.
- [contract](#)
 - Two sample ERC20 contracts showcasing how to implement Verite into a smart contract.
- [solana](#)
 - A sample Solana program demonstrating how to implement Verite into a program.
- [e2e-demo](#)
 - A demo walkthrough of the entire Verite project, showcasing issuance, verification, and revocation, with additional demos for DeFi and custodial use cases.
- [wallet](#)
 - A demo wallet for storing and submitting credentials. Written in React Native using Expo.

In addition to the packages above, there are 3 single-purpose demo packages, largely extracted from the e2e-demo package to help clarify each major function of Verite credentials.

- [verite/demo-issuer](#)
 - A simplified demo of issuing Verifiable Credentials using
- verite
- .
- [verite/demo-verifier](#)
 - A simplified demo of verifying Verifiable Credentials using
- verite
- .
- [verite/demo-revocation](#)
 - A simplified demo of revoking credentials using
- verite
- .

Each package contains a README file with specific details about how to use the package.

Verite Credentials Faucet (Github[Link](#))

)

This is a service for issuing and verifying Verite credentials for testing purposes, useful for hackathons, local integrations, etc. Updated 3 months ago * [Table of Contents](#) * * [Verite Project \(Github Link\)](#) * * [Verite Credentials Faucet \(Github Link\)](#)
