

Hi Uniswap Community,

We published our most recent issue of the Uniswap Monthly Report, summarizing protocol metrics for October 2024.

You can find our latest report at newsletter.oku.trade and subscribe for future monthly releases.

Here's the executive summary:

- In October 2024, the Uniswap Protocol processed \$48.24 billion in monthly volume (+20.2%) across \$5.73 billion in liquidity (+2.8%), earning market makers \$80.30 million in fees (+30.1%).
- Across all chains, Ethereum saw the most Uniswap volume with \$24.83 billion in v3 pools, seconded by Arbitrum. Each of the major deployments except for Arbitrum saw increases in volume and fees.
- This month, the protocol experienced a relative decline in volume (-3.9%) and fees (-3.8%) over competing DEX protocols, with a slight increase in liquidity (+0.4%).
- Layer 2 deployments' share of volume and fees fell this month, while their liquidity share rose slightly for the second consecutive month.
- This month, the recent Uniswap v3 deployments on Gnosis and BOB were added to the report.

The report contains charts and tables displaying the data and exact figures. We're eager to continue aggregating this data and sharing our findings.
