

# Contract Addresses and Docs

## EigenLayer Core Restaking Contracts

The EigenLayer core contracts are located in this repo [Layr-Labs/eigenlayer-contracts](https://github.com/Layr-Labs/eigenlayer-contracts) . They enable restaking of liquid staking tokens (LSTs) and beacon chain ETH to secure new services, called AVSs (actively validated services).

### Deployment Addresses

An up-to-date reference of our current mainnet and testnet contract deployments can be found in the core repository README: [eigenlayer-contracts/README.md#deployments](https://github.com/Layr-Labs/eigenlayer-contracts/blob/main/README.md#deployments) .

### Technical Documentation

Our most up-to-date contract-level documentation can be found in the core repository's docs folder [eigenlayer-contracts/docs](https://github.com/Layr-Labs/eigenlayer-contracts/blob/main/docs) . [Previous Terms of Service](#) [Next Learning Resources](#)
