

TVC Gauge

Velocore V2 now aims to become an open liquidity platform for all LP providers. There is no whitelisting required by Velocore to create gauges or add bribes.

As introduced earlier, anyone in Velocore V2 can create a pool composed of various tokens and fees. A gauge is automatically created with the pool and anyone can bribe it, which is applied in real-time. Even more, bribers can choose how long their offered bribe will be released and they can also fine-tune the duration of the release period for each bribe token.

Through this, Velocore plays the role of a diverse liquidity market that allows customization, and liquidity providers can utilize this in a permissionless way.
