

I want to find out historical holding patterns for users. Specifically, which reserves they had collateral/debts in. I am thinking of using the `getUserReservesData` from `UiPoolDataProvider`, and calling it on an archive node. Unfortunately, I am not able to figure out how to find the historical address of the `UiPoolDataProvider` contract.

As far as I can understand, the current contract is called 'UiPoolDataProviderV2V3', and is at the address [0x00e50fab64ebb37b87df06aa46b8b35d5f1a4e1a](#). However, it seems to be created in January 11, 2023, and I cannot help but think that there has to be older contracts. Perhaps ones called [UiPoolDataProvider](#) and/or [UiPoolDataProviderV2](#). How do I go about finding their addresses in past blocks?

I have looked at the `getAddress`

function of `LendingPoolAddressProvider`. However, I do not know what id to use when calling this function.

Thanks in advance for your help!
