

Hi, I would like to conduct a research to understand where will be the PoS validators (once moved from PoW to PoS) geographically in Ethereum network. It's important to understand If there is a fair representation from different parts of the world (i.e.developing nations) . This research will enable us to understand landscape, challenges and barriers to have a true decentralisation from global geographical perspective.

Please feel free to post your thoughts and any material, personal i can reach out to make this research successful.

Thank you all in advance.
