

Hi All,

Subsequent to twitter spaces discussion, it seems that there is a scenario AIP-5 staking proposal may lead to a situation where a holder of a large amount \$APE coin and only one NFT maybe able to disproportionally gain benefit from the staking rewards. If this is true, a potential solution that was discussed was to place a limit on the amount of \$APE coin that each NFT can accural to the pool.

I have personally changed my vote to against AIP-5, hoping to trigger a discussion on this topic to improve clarity on how the staking mechanism works.
