

Hi all, I'm trying to install catalyst, and am having a bit of trouble.

The actual install process went smoothly, and I am able to activate catalyst within Miniconda3. However, when I enter to check catalyst version:

```
(catalyst) C:\Users\OP>catalyst --version
```

and confirm proper installation, it throws an error

'catalyst' is not recognized as an internal or external command, operable program or batch file.

Please help, thank you!
