

GM to everyone in dYdX from the Forbole team!

[Forbole](#), founded in 2017, is a leading staking provider and professional node operator for over 60 Proof-of-Stake networks and bridges including Axelar, Cosmos Hub, Solana, Sui, and Wormhole. With a global team of skilled engineers, innovative marketers, and talented designers, we have gained the trust of numerous stakers worldwide.

In addition to our staking solutions, we strongly believe in the power of open source tooling. To demonstrate our commitment, we have developed [Big Dipper](#), an open-source block explorer. Widely embraced within the Cosmos ecosystem, Big Dipper has gained immense popularity and has been forked over 300 times, highlighting its value and the recognition it has received from the community.

We are thrilled with the announcement of dYdX's move to the Cosmos ecosystem. Cosmos interoperability will enable dYdX to facilitate cross-chain trading, expanding its reach to a wider audience. As an active members of the dYdX community, we eagerly look forward to contributing our expertise, supporting open source initiatives, and fostering collaboration within the ecosystem.
