

Cow is already a top-tier aggregated dex (by aggregated volume) on Ethereum. I think it's a good time to expand to other EVM L1/L2s.

The EVM L1/L2s markets are quite large. 1inch has \$11b aggregated in November. \$7.1b of them is from Ethereum mainnet, while long-tail markets (Base, Arbitrum, Avalanche C Chain, etc) contribute almost \$4b. Odos has \$7.2b last month and \$6.5 of them came from long-tail markets.

Cow performs very well on Ethereum, and I believe in its potential in other long-tail markets. Expanding markets is critical for Cow's future growth.
