With this release, users can quickly add (or absorb) up to 10 models to a primary account and easily manage submissions and stakes on a consolidated models management page

Multi-model account support does have some important implications that users need to understand before enabling - especially for compute/API users - so it is disabled by default. To enable it, visit the the new [Models](#) management page and click the Enable-Multi-Model-Support button.

If you are a compute/API users ensure you have the latest releases and have updated your code to pass `model_ids` which can be found on the [Models](#) management page.

- [NumerAPI >= 2.2.4](#)
- [Numerox >= 4.1.6](#)
- [Numerai-cli > 0.1.22](#)
- [Rnumerai >= 2.1.1](#)

Numerai compute users should also be sure to checkout a new [python3-multimodel](#) example.

If you have any questions, feedback or need support, jump in the `#multi-model-support` room on Rocketchat.

Finally, a shoutout and special thanks to all of our beta testers for providing great feedback and bug reports during testing phase.
