

# Deployed Contracts

The following tables contain the current contract deployments for the core EigenLayer smart contracts.

## EigenLayer Core Restaking Contracts

The EigenLayer core contracts are located in this repo [Layr-Labs/eigenlayer-contracts](#) . They enable restaking of liquid staking tokens (LSTs) and beacon chain ETH to secure new services, called AVSs (actively validated services).

For more information on the core restaking contracts and their technical specifications, please see [EigenLayer Core Technical Docs](#) .

### Current Mainnet Deployment

The current mainnet deployment is from a much older version of the core contracts repo. You can view the deployed contract addresses below, or check out the code itself on the [mainnet](#) branch.
