The team behind Secret Dreamscape is requesting \$35,000 USD to finish the development of one of the first games built entirely on-chain. We believe gaming on Secret Network is the next critical vertical, after DeFi and NFTs. NFTs will soon enter mainstream gaming culture and the community would greatly benefit from having a game like Secret Dreamscape on mainnet using NFTs and thus cementing Secret Network's position as a viable Layer-1 solution for play-to-earn gaming.

### About Our MVP

We strongly believe a game like Secret Dreamscape is critical for network growth. Our MVP has already been released with the features essential for a fun game experience with play-to-earn mechanics:

- Local wallet for a better user experience. This way players do not need to constantly sign transactions.
- The foundation for building out smooth frontend animations. This game uses a powerful web game engine that helps achieve a rich player experience that goes well beyond today's text-based NFT gaming.
- Social Gaming: Thanks to real-time multiplayer support, the game will be the first social gaming hub for Secret Network.

### January Release

For our January mainnet release, we will build these essential features:

- Play-to-earn: We have novel features planned to help players add more value to their deck of NFT cards (NFTs). Features to be announced at launch.
- Texas Holdem style Flop, Turn, River betting.
- Add numerous frontend UX enhancements (such as player activity indicators, sound effects, deck inventory screens, notifications, and more) to give the game a professional level of polish
- Capping tables so players can choose low stakes, family style games or higher stakes professional games
- Playable NFTs - players will be able to buy and sell cards in order to build up their custom deck
- Private NFT data will be utilized with in-game mechanics that will give players a chance to earn more secret outside of the main game (specifics to be announced at launch)

### Roadmap

If we get enough traction then we have the following post-release features planned to enhance game experience and further drive network growth:

- Currency conversion. We will allow players to send ETH and anything in Cosmos in order to fund their accounts, providing another on-ramp for new user adoption.
- In-Game Chat: We have begun conversations with the Alter team to integrate in-game chat.

### Our Team's Contribution to the Secret Network

To-date the Secret Dreamscape team has participated in the community in several ways:

- Delegating SCRT, helping secure the network
- Gino is now leading the weekly dev-committee calls
- We will open source all smart contract code

so other teams can learn from our development patterns. That will be a total of 4 unique contracts. We expect this will be an on-ramp for new development teams seeking to develop on Secret Network.

- We generated a community developer survey and presented the aggregated results of 26 community member's (most with at least 6 or more years of general programming experience and half with at least 1 year of Secret Network development experience) responses which identified and validated development needs within the community.

- We recognize a strong need to create more development tools (insights learned straight from community feedback and also through our own development efforts) for the community and have plans to create them.
- Danny has been sharing solutions to development issues discussed in Discord channels
- Built an MVP version of the game, hosted on our testnet here <http://secretdreamscape.com/> and playtested with community members
- Great early review has already been shared in a youtube live stream with a community member. Excerpts provided here: [Scott Blown Away by This Crypto Card Game on Secret Network | Secret Dreamscape - YouTube](#)
- View our MVP trailer here: [Secret Dreamscape Trailer - YouTube](#)

Gaming is a critical vertical for the long term success of Layer 1 development chains like Secret Network. We hope the community recognizes our initial contributions and sees our team as one that can deliver. Funding this grant would show that the community believes a game like Secret Dreamscape can help drive network growth both through new user adoption and new development partners. Funding would help our team take the game from its current concept to a fun and playable game for a broad audience of gamers.

If you have not already heard about Secret Dreamscape, we will soon be added to the Secret Network roadmap to be announced in an upcoming Secret Network blog post.
