

## Summary

Proposal to release a total of \$15'000 as payouts for different Aave <> Immunefi bounties, together with \$1'000 as fee to the Immunefi platform; amounting a grand total of \$16'000.

## Motivation

As disclosed in [this post](#), we think it is appropriate to split bug bounty payouts from disclosure and fix stages, for Low, Medium and High reports.

The objectives are not creating unnecessary interdependencies, and keep a healthy and frequent payment schedule for white-hats participating securing Aave.

This proposal will cover the outstanding bounties of the previous severities, pending to be paid until today 24th January 2024.

## Specification

This proposal, following an approach similar to Direct-to-AIP, will go directly on-chain and will release the following funds to white-hat addresses and the Immunefi platform:

- \$5'000 to 0x8689e84af34A18Bc461928aa554a71C649beED89
- \$10'000 to 0xD122c282499Cb6A76197db2D6ba5170D81C4895f
- \$1'000 to 0x2BC5fFc5De1a83a9e4cDDfA138bAEd516D70414b

(immunefi.eth). This is the fee corresponding to the 10% of the previous bounty only, as the extra 500\$ for the first one have already been paid in the round of December 2023.

## Next steps

After 1 day in this forum, we will create the AIP on-chain, prior confirming with contributors on the financial side of the DAO ([@karpatkey\\_TokenLogic](#)) about the payment currencies.

Additionally, we will request representatives of Immunefi to confirm in this thread that the requested payouts effectively correspond with outstanding resolutions in the platform.
