

Currently, if you bridged your AAVE tokens from Ethereum layer 1 to Polygon, they have 0 voting power in AAVE governance. In my case, I bridged my AAVE tokens to Polygon to deposit into AAVE polygon. I did not realize that having the AAVE tokens on polygon would nullify their voting power.

It is understandable that votes will stay on Layer 1 for the time being, but layer 1 is able to see your token holdings on Polygon.

The proposal is simple: Allow the AAVE governance system to determine voting power by looking at AAVE token holdings on both Layer 1 and on Polygon.

Current voting power with my AAVE tokens that are bridged to Polygon:
