

Hi,

I have 2 propositions.

1. increase fee of sell GMX trx by 1% (or different %)

use this funds collected by 1% to buyback and burn GMX

burning GMX will mean that instead of burned GMXs will be created esGMX that will be used for rewarding stakers or used for other purpose like developing GMX platform.

This will lead to decrease number of GMX that are available on market, reward stakers and will set double thinking for sellers.

1. set max MultiplierPoints per esGMX.

My concern about esGMX is that this can destroy project.

in long term if there will be many never vested esGMX could lead to GMX very small % of reward for stakers.

To prevent this situation there could be set max capacity of MP per esGMX.

For example max 2 MP per 1 esGMX.

This will help project in way that there will be more pressure to vest esGMX which will lead to block GMX and GLP on platform for vesting.
