

Hello, everyone

I am Adacui, a normal investor on [Summer.Fi](#) and I opened a Vault before...

But, because of my negligence, I didn't notice that they were going to close the CRVV1ETHSTETH-A position. When I found out that my CRVV1ETHSTETH-A 29860 position had been liquidated on 23rd August, I contacted them but I got the following result about my vault.

[

Dashboard for watching DAI minting and MKR token burning in real time.

My collateral has been auctioned with a such low final price \$1162. (The ETH market price at that time should be around \$1630.)

I don't understand why my collateral would be sold in such a low price... They said it is the protocol desinged. No one can control it.

I come here to share my case and try to get some help from the Maker community.

What I wondering are:

- 1, Is the liquidation price (\$1162) correct?
- 2, Are there any way to recover my loss (even part of them)?

Hope you gays could give me some advice!

Thanks a lot!!!
