

Would you like to have 100% protection against volatility for your crypto?? This could be done using the new Concentrated Liquidity of v3 by just changing or adding a few things!

Imagine adding liquidity to the ETH/USDC pair for example (50% of each), and in case the ETH price drops and gets out of your range, your capital is turned 100% into USDC!! This way you would be 100% PROTECTED against LOSSES! And in case the ETH price goes up again and completely crosses your range in an upward direction, your capital would be automatically swapped 100% into ETH!!

You could even manually FOLLOW or TRAIL the ETH price every time it goes up, by removing and adding a new liquidity range at a higher price, and this could help you MAXIMIZE YOUR PROFITS!! You could very efficiently trade tops like this! Just imagine trading perfectly the ETH TOP of this Bull market! Either if it is 10k, 15k, or 20k, you could just follow it and trade it perfectly!! And after it drops, you can continue to follow the price, GROWING YOUR CAPITAL thanks to a high yield from fees, and volatility itself! Knowing your capital is always completely PROTECTED against ANY LOSSES!!

The problem now is that the direction of the swaps inside a liquidity range are exactly the opposite as they should be... Using the same example, if the ETH price drops out of your range, your capital is swapped 100% into ETH, and if the price goes up and gets out of the range, your capital is 100% swapped into USDC... It should be the exact opposite!

So this is a PROPOSAL to change the direction the swaps are made inside a liquidity range to the exact opposite they are now, or to at least let the users choose the direction of the swaps when they add liquidity to the pools or create ranged orders.

If we make this change, it would be DISRUPTIVE and Uniswap will completely BREAK all other DEXs and CEXs!! People would LOOSE the FEAR of losing their money because of volatility!! This would easily help with crypto's mass adoption!! And it will definitely drive more LPs to v3!! Please think about it and support this proposal!! Thanks!!
