

From a trader's perspective, I think the 0.1% flat opening and closing fees are not competitive compared to other CEX's and DEX's. I think a much better system would be to incentivize traders based on the volume they trade over a certain time period. For example, the fees could look something like this:

Volume (30D)	Fees
1M\$	0.095%
5M\$	0.09%
10M\$	0.08%
20M\$	0.065%
50M\$	0.045%

I think implementing a system like this could promote more growth and volume and entice more new traders to join the platform. Additionally, I think an interesting idea may be to have owning a GBC NFT bump you up a fee tier. DyDx does this with their Hedgies NFT and I think it could be good for the GMX ecosystem.
