

# Arbitrum chain information

## Arbitrum public RPC endpoints

caution \* Unlike the RPC Urls, the Sequencer endpoints only support `eth_sendRawTransaction` \* and `eth_sendRawTransactionConditional` \* calls. \* Arbitrum public RPCs do not provide Websocket support. \* Visit [Quicknode's Arbitrum Sepolia faucet](#) \* for testnet Sepolia tokens on L2. This section provides an overview of the available public RPC endpoints for different Arbitrum chains and necessary details to interact with them.

Alternatively, to interact with public Arbitrum chains, you can rely on many of the same popular node providers that you are already using on Ethereum:
