

I had brought over my scrt from the erc 20 chain over to the secret network over the bridge - I had brought over about 9400 scrt- this was at end of feb 2021. I kept them on my keplr and converted them into ssrt. Then I used it to get seth by swapping it for seth. I used this seth in the ethereum pool and was getting ssrt which is put back into the same pool. This was again around end of feb and beginning of March. Around 29/30th March I got about 1400 scrt again ftm

Binance to keplr and did the same.

I didn't get any airdrop.

Was I eligible for sefi airdrop ?

My secret address on keplr is

secret1wj3sk5dpr0u9lm80l454fehavwjdk4k5d50kyj

My metamask ETH address is 0xe898d699443c6cc2eda444c64a916ca7f889041c6

I have tried asking in the telegram chat about this few times and was directed to ask here for someone to look into the above .

Thanks

By the way I am currently providing LP to couple of pools on SEFI and this morning inspite of providing high fee and gas of 500000 my attempts to swap sefi for ssrt 5 times failed.

It has been nearly a week since sefi launch and I was hoping things would be getting better on the network after waiting patiently this long .
