

Hi everyone, I'm new here after buying half a dozen Apecoins on the weekend (not many I know)

I bought my Apecoins on Revolut, which is where they are held and they aren't recognised by the wallet here, neither is the Coinbase wallet or Binance.

I had to buy a new Apecoin through Coinbase, transfer to MetaMask and then link it here so I could join the forum.

So my questions are:

1. When it comes to staking I won't be able to do that through Revolut, so would you suggest holding those I've got and purchasing further Apecoin - (im planning on investing each month) through the coin base to MetaMask way?
2. Are there any plans to add Coinbase to your list of Wallets?
