

This is for discussing the v3 upgrade, which I propose we call the “Ginger Peppermint Network Upgrade.”

The Ginger Peppermint

upgrade should be a Meta CIP, which includes:

- [CIP-21](#): Introduce blob type with verified signer
- [CIP-24](#): Versioned Gas Scheduler Variables
- [CIP: Limit number of PFBs and non-PFBs per block, increase transaction size limit](#)
- [CIP: Decrease block time to 6 seconds](#)
