

## seid keys mnemonic

Create a bip39 mnemonic, sometimes called a seed phrase, by reading from the system entropy. To pass your own entropy, use `--unsafe-entropy`

Usage: `seid keys mnemonic [flags]`

Flags: `-h`, `--help` help for mnemonic `--unsafe-entropy` Prompt the user to supply their own entropy, instead of relying on the system

Global Flags: `--home` string The application home directory (default `"~/sei"`) `--keyring-backend` string Select keyring's backend (`os|file|test`) (default `"os"`) `--keyring-dir` string The client Keyring directory; if omitted, the default 'home' directory will be used `--log_format` string The logging format (`json|plain`) `--log_level` string The logging level (`trace|debug|info|warn|error|fatal|panic`) `--output` string Output format (`text|json`) (default `"text"`) `--trace` print out full stack trace on errors Last updated on July 1, 2024 [list](#) [parse](#)
