

Yo

I'm hoping to start a discussion around creating long term sustainable revenue for the DAO. Right now there is \$2M in ETH sitting in a DAO controlled address as a result of sequencer revenue. I'd like to converse about:

1. Ways to increase this revenue / if we want to.
2. How these funds might one day be used.

There are two potential methods for the DAO to increase sequencer revenue:

1. Update the sequencer to a MEV collecting address (many methods this might be implemented to create value for ARB).
2. Increase the cost of transacting on the L2 in order to increase the delta between L2 fees and cost to post call data to the L1.

The revenue can be used for countless potential ideas: public goods funding, return to token holders, protocol owned liquidity, incentives and so much more.

Lets chat!
