

minTargetTokenSaleAmount()

```

Copy function minTargetTokenSaleAmount() external view returns (uint128);

```

This function returns the minium amount of "targetToken" that can be in the account balance before triggering a top up and price update.

Once "targetToken" sale amount is below this value, it will reset the price and restart the auction

Example

```

Copy minTargetTokenSaleAmount() returns( 10000000000000000000; )

``` [Previous finalTargetToken\(\)](#) [Next minTokenSaleAmount\(\)](#) Last updated 1 month ago
