

Hello Numerai!

I find very useful that in e-mail with results for resolved round, there is a CORR performance histogram across all submitted models and a percentile number. For me this number is quite important, because I can clearly see how successful my model was in comparison with other models. Now since it is possible to stake on both CORR and MMC combined (my case), percentile is useful, but not so much, because for me payout is calculated from CORR+MMC, not CORR only. Would it be possible to include MMC histogram and percentile in e-mails too? Or even CORR+MMC histogram? That would be awesome!!!

H.
