

Hey solvers! Good to e-meet with y'all. This is Oliver from OpenOcean.

OpenOcean is the most efficient DEX aggregator, integrating major DEXs across 18 blockchains. OpenOcean's intelligent routing algorithm optimizes swaps for maximum returns and is completely free to use!

We're here to seek an opportunity to collaborate with CoW solver by providing our swap API.

We run API tests with different trade sizes and at different time frames, and the results show that we outperform 1inch/Macha/ParaSwap on prices for 70% of sample trades on Avalanche, 55% on BNB Chain, 49% on Polygon, which means integrating us could help you find better pricing on a significant amount of trading scenarios.

Several projects have adopted our API to provide the price quoting function as the core service, such as Mask, Li Finance, XY Finance and RangoExchange. Additionally, ONTO Wallet, XDefi Wallet and Fantom Wallet implemented our API for the swap function.

Explore these docs and let our API empower your swap and/or arbitrage trading!

Curve Finance recently gave us credit on having competitive pricing on large volume order, check attached tweet below:

[Curve Finance](#)

[@CurveFinance](#)

Interesting new aggregator [@OpenOceanGlobal](#). Sometimes gives better results than [@1inch](#) via [@synthetix_io](#) atomic swaps.

At the same time, needs Curve V2 integration to throw into aggregation, too!<https://t.co/eHSO2U9Eps>
