

Interface: ApiContext

Define the context to use for the CoW Protocol API.

CoW Protocol is a set of smart contracts and off-chain services, deployed on multiple chains [Supported chains](#) are:

- Mainnet
- Gnosis Chain
- Sepolia

Each chain has its own API, and each API has its own base URL.

Options may be selectively overridden by passing a [PartialApiContext](#) to the constructor.

See

<https://api.cow.fi/docs/#/>

Properties

baseUrls

• Optional baseUrls : [ApiBaseUrls](#)

URLs that may be used to connect to this context.

Defined in

external/cow-sdk/src/common/configs.ts:69

chainId

• chainId : [SupportedChainId](#)

The `chainId` corresponding to this CoW Protocol API instance.

Defined in

external/cow-sdk/src/common/configs.ts:67

env

• env : [CowEnv](#)

The environment that this context corresponds to.

Defined in

external/cow-sdk/src/common/configs.ts:68 [Previous Twap](#) [Next ConditionalOrderArguments](#)
