

Hi there,

I'm trying to send RSR from my ledger to the secret bridge. I have connected metamask and my ledger an also Keplr. This is the first time doing this so was expecting to approve 2 transactions, but metamask only asked me to approve 1 - which I did and went through ok, however the webpage just sat waiting for acceptance from metamask. I've spent ETH on the first tx so don't want to do this again without investigating why it might not be working. Any ideas? Thanks.
