

Good morning everyone,

I thought it might interest some of you.

We have just released a paper and a proof of concept implementation of Zerocash on Ethereum.

The paper can be found here: <http://arxiv.org/abs/1904.00905>

The code can be found here: <https://github.com/clearmatics/zeth>

This is a proof of concept and many things need to be addressed (see paper and issues on the github repo) for more details on this.

Happy to get any feedback/comment.

Have a great day
