

avro.encode

Encodes a record's field into the Avro format.

Description

The processor takes a record's field and encodes it using a schema into the [Avro format](#) . It provides two strategies for determining the schema:

- preRegistered
- (recommended)
- This strategy downloads an existing schema from the schema registry and uses it to encode the record.
- This requires the schema to already be registered in the schema registry. The schema is downloaded only once and cached locally.
- autoRegister
- (for development purposes)
- This strategy infers the schema by inspecting the structured data and registers it in the schema registry. If the record schema is known in advance it's recommended to use the preRegistered strategy and manually register the schema, as this strategy comes with limitations.
- The strategy uses reflection to traverse the structured data of each record and determine the type of each field. If a specific field is set to nil the processor won't have enough information to determine the type and will default to a nullable string. Because of this it is not guaranteed that two records with the same structure produce the same schema or even a backwards compatible schema. The processor registers each inferred schema in the schema registry with the same subject, therefore the schema compatibility checks need to be disabled for this schema to prevent failures. If the schema subject does not exist before running this processor, it will automatically set the correct compatibility settings in the schema registry.

This processor is the counterpart to [avro.decode](#) .

Configuration parameters

- YAML
- Table

version :

2.2 pipelines : -

id : example status : running connectors :

define source and destination ...

processors : -

id : example plugin :

"avro.encode" settings :

The password to use with basic authentication. This option is

required if auth.basic.username contains a value. If both auth.basic.username and auth.basic.password are empty basic

authentication is disabled.

Type: string

auth.basic.password :

"""

The username to use with basic authentication. This option is

required if auth.basic.password contains a value. If both auth.basic.username and auth.basic.password are empty basic

authentication is disabled.

Type: string

auth.basic.username :

"""

The field that will be encoded.

For more information about the format, see [Referencing fields](<https://conduit.io/docs/processors/referencing-fields>).

Type: string

field :

".Payload.After"

The subject name under which the inferred schema will be registered

in the schema registry.

Type: string

schema.autoRegister.subject :

"""

The subject of the schema in the schema registry used to encode the record.

Type: string

schema.preRegistered.subject :

""

The version of the schema in the schema registry used to encode the record.

Type: int

schema.preRegistered.version :

""

Strategy to use to determine the schema for the record. Available

strategies are: * preRegistered (recommended) - Download an

existing schema from the schema registry. This strategy is further

configured with options starting with schema.preRegistered.*.

autoRegister (for development purposes) - Infer the schema from

the record and register it in the schema registry. This strategy is

further configured with options starting with

schema.autoRegister.*.

For more information about the behavior of each strategy read the

main processor description.

Type: string

schema.strategy :

""

The path to a file containing PEM encoded CA certificates. If this

option is empty, Conduit falls back to using the host's root CA set.

Type: string

tls.ca.cert :

""

The path to a file containing a PEM encoded certificate. This option

is required if tls.client.key contains a value. If both tls.client.cert and tls.client.key are empty TLS is disabled.

Type: string

tls.client.cert :

""

The path to a file containing a PEM encoded private key. This option

is required if tls.client.cert contains a value. If both tls.client.cert and tls.client.key are empty TLS is disabled.

Type: string

tls.client.key :

""

URL of the schema registry (e.g. http://localhost:8085)

Type: string

url :

"" Name Type Default Description auth.basic.password string .css-145lt8w{max-width:100%;font-family:"Roboto","Helvetica","Arial",sans-serif;font-size:0.8125rem;display:-webkit-inline-box;display:-webkit-inline-flex;display:-ms-inline-flexbox;display:inline-flex;-webkit-align-items:center;-webkit-box-align:center;-ms-flex-align:center;align-items:center;-webkit-box-pack:center;-ms-flex-pack:center;-webkit-justify-content:center;justify-content:center;height:32px;color:rgba(0, 0, 0, 0.87);background-color:rgba(0, 0, 0, 0.08);border-radius:16px;white-space:nowrap;-webkit-transition:background-color 300ms cubic-bezier(0.4, 0, 0.2, 1) 0ms,box-shadow 300ms cubic-bezier(0.4, 0, 0.2, 1) 0ms;transition:background-color 300ms cubic-bezier(0.4, 0, 0.2, 1) 0ms,box-shadow 300ms cubic-bezier(0.4, 0, 0.2, 1) 0ms;cursor:unset;outline:0;-webkit-text-decoration:none;text-decoration:none;border:0;padding:0;vertical-align:middle;box-sizing:border-box;}.css-145lt8w.Mui-disabled{opacity:0.38;pointer-events:none;}.css-145lt8w .MuiChip-avatar{margin-left:5px;margin-right:6px;width:24px;height:24px;color:#616161;font-size:0.75rem;}.css-145lt8w .MuiChip-avatarColorPrimary{color:#fff;background-color:#1565c0;}.css-145lt8w .MuiChip-avatarColorSecondary{color:#fff;background-color:#7b1fa2;}.css-145lt8w .MuiChip-avatarSmall{margin-left:4px;margin-right:4px;width:18px;height:18px;font-size:0.625rem;}.css-145lt8w .MuiChip-icon{margin-left:5px;margin-right:6px;color:#616161;}.css-145lt8w .MuiChip-deletelcon{-webkit-tap-highlight-color:transparent;color:rgba(0, 0, 0, 0.26);font-size:22px;cursor:pointer;margin:0 5px 0 -6px;}.css-145lt8w .MuiChip-deletelcon: hover{color:rgba(0, 0, 0, 0.4);}.css-9iedg7{overflow:hidden;text-overflow:ellipsis;padding-left:12px;padding-right:12px;white-space:nowrap;} null The password to use with basic authentication. Examples

Auto-register schema

This example shows the usage of theavro.encode processor with theautoRegister schema strategy. The processor encodes the record's.Payload.After field using the schema that is extracted from the data and registered on the fly under the subjectexample-autoRegister .

Pre-register schema

This example shows the usage of the `avro.encode` processor with the `preRegistered` schema strategy. When using this strategy, the schema has to be manually pre-registered. In this example we use the following schema:

```

{ "type" : "record" , "name" : "record" , "fields" : [ { "name" : "myString" , "type" : "string" } , { "name" : "myInt" , "type" : "int" } ]
} The processor encodes the record's Key field using the above schema.

```
