

Alec here, CEO of Tenderize Labs - We launched Tenderize v1 in May 2022 on Arbitrum, the largest native liquid staking application on the chain.

I've been building on Arbitrum for a few years, starting with my first protocol Sperax, the Arbitrum native stablecoin launched in 2021.

[Twitter announcement of Tenderize V2 testnet](#) - We are eager to hear from the Arbitrum community. Tenderize is a fully permissionless liquid staking protocol allowing users to liquid stake GRT and LPT with validator-specific LSTs. Tenderize enables liquid staking without compromising a decentralized validator set, delivering a liquid staking experience as close to native staking as possible.

Liquid Staking Revolution... live on testnet

A revolution is happening in liquid staking and it's now on Arbitrum Goerli testnet!

[cooking.tenderize.me/](https://cooking.tenderize.me/) is the link

Key features of testnet

- Token faucets to collect testnet tokens and begin exploring Tenderize v2
- Stake to the indexer of your choice
- Instantly unstake through TenderSwap
- Unstake by waiting the unbonding period

How Tenderize benefits indexers:

- Liquify current delegates without losing AUM
- Tap into permissionless, on-chain liquidity
- Offer borrowing and other LSDfi experiences

Benefits to stakers / Delegators

- Liquid stake your GRT or LPT
- Collect WAGYU rewards
- Swap or send tokenized stake
- Instantly unstake
- Borrow against stake
