

Hey,

My name is Matt and I work for Informal Systems Validator. We hold regular community calls every month with different topics and guests. For September I was thinking it would be great to host one that is DYDX specific. Topics will include the testnet, the future of decentralized incident response, the roles governance will play on DYDX and network metrics that should be monitored. If there are other topics people would like to discuss just let me know! To receive an invite to our call please join the google group at <https://groups.google.com/g/informalsystemsvalidatorteam>
