

Hi everyone,

As expected, the age of ad-hoc bridges is coming to an end. Within Cosmos, we have IBC, but outside of it, we need to select bridge partner(s). Very much in line with Osmosis, I would urge us not to dilute the liquidity on our network, and focus on a single bridge partner.

Tangentially, over time, we should also create a mechanism to port any liquidity on the bridges that SCRT Labs developed, but that's a topic for another time.

In the past few months, a few bridges have reached out to us, and this is a situation where I think it isn't for SCRT Labs to decide what's best for the network. In fact, I would look to someone (perhaps the infra committee?) to step up and lead this effort (take calls, compile data, and reach a decision within a few weeks).

Opening the discussion here so we can ideate on how to manage this, but the time to make a decision is now.
