

Installing CometBFT

Downloading the latest release

Namada is compatible with CometBFT tagv0.37.2

You can download the latest release from [this repository \(opens in a new tab\)](#).

- The latest release is v0.37.2
- which can be installed [here \(opens in a new tab\)](#)
- .

Adding the binaries to PATH

If you have `go` installed and downloaded, you may want to add it to your `GOPATH/bin` directory. This can be done by running the following command in the root directory of the repository

```
cp
```

```
< path-to-cometbft-binary
```

```
 GOPATH/bin/ Otherwise, we recommend you simply copy it to your /usr/local/bin which may require sudo permissions.
```

```
sudo cp /usr/local/bin/
```

And enter your password when prompted.

In order to check that the installation was successful, you can run the following command

```
cometbft
```

version Which should output something like:

```
0.37.2
```
