

Hey Everyone, I am currently developing a framework for measuring decentralization in blockchain based networks - starting with Ethereum. As I am looking for more data, literature and communities, I thought this is the perfect place to exchange some thought on that matter.

Specifically, I am looking for data on:

1. [Reachable Nodes](#)
2. [Active Addresses](#)
3. Number of Archive Nodes
4. Number of Active Miners, Mining Pools
5. Number of Active Validators and Stakers, Pools
6. Active Developers
7. Active Co-Authors of the Ethereum Improvement Proposal

If you know of additional or helpful links, sources or datasets, I'd love to hear from them!

Thank you
