

We [passed an AIP](#) a while back that was to create an app for ApeCoin related Spaces, with transcriptions, translations and summaries. [This](#) update threads is the progress log. Long story short, the app has been out for a while. You can search for “ApeCast” on either the app store or play store.

Some of the key features:

- Has transcriptions - easy to follow along if you cant fully understand the audio.
- Has chapter summaries. So a long episode is divided up into chapters and summarized. This way you can skip around to the most interesting parts.
- Summaries are multi lingual.
- Has transcripts and summaries of other crypto podcasts as well. It also tells you where the ads are so you can skip it!

One of the other things we did was clean up the audio and improve the vocals of 4 spaces in the ApeCoin ecosystem. If you compare the audio quality to the original spaces, these are much better and clearer. It's also a lot easier to skip around and navigate.

## ApeComms

Spaces hosted by @Mocaverse\_Hall

You can listen to all of the above in any of your existing podcast players, or on the ApeCast app itself. The advantage of listening on ApeCast is that you get the transcripts and the summaries. We didn't want to trap the cleaned audio, so we're letting people listen to them where ever they like

With this we have reached the original goals and intentions. We're working on adding more features to continue to deliver beyond what was promised. We're excited to build for the ecosystem!
