

Hi all,

@[HelloShreyas](#) and @[schlabach](#) here from Llama, which provides treasury management as a service for DAOs and protocols.

We wanted to share that we've proposed a \$25k allocation to stETH from ARCx's treasury. We chose stETH so we could earn yield while keeping things relatively simple for now.

You can check out the full proposal here: [Introducing ARCx Growth Allocation I: Deploy Treasury Productively - Improvement Proposals - ARCx](#). Would love any thoughts or feedback that Lido has on this!
