

seid query txs

Search for transactions that match the exact given events where results are paginated. Each event takes the form of '{eventType}.{eventAttribute}={value}'. Please refer to each module's documentation for the full set of events to query for. Each module documents its respective events under 'xx_events.md'.

Example: `query txs --events 'message.sender=cosmos1...&message.action=withdraw_delegator_reward' --page 1 --limit 30`

Usage: `seid query txs [flags]`

Flags: `--events` string list of transaction events in the form of {eventType}.{eventAttribute}={value} `--height` int Use a specific height to query state at (this can error if the node is pruning state) `-h, --help` help for txs `--limit` int Query number of transactions results per page returned (default 30) `--node` string : to Tendermint RPC interface for this chain (default "tcp://localhost:26657") `-o, --output` string Output format (text|json) (default "text") `--page` int Query a specific page of paginated results (default 1)

Global Flags: `--chain-id` string The network chain ID `--home` string directory for config and data (default "~/.sei") `--log_format` string The logging format (json|plain) `--log_level` string The logging level (trace|debug|info|warn|error|fatal|panic) `--trace` print out full stack trace on errors Last updated on July 1, 2024 [tx upgrade](#)
