

@magg, recently, our \$7.7k grant proposal to build a comprehensive volume metrics tool for traders on dYdX was rejected. As you know the reason provided was that there are already funded grants that cover these needs. We also recognize the importance of tools that provide insights into liquidations, open interest, and other crucial metrics, presented in a way that is genuinely useful for active traders.

However, after reviewing the available resources, we haven't been able to find the specific tools you mentioned that would fulfill these requirements. As traders here at dYdX, having access to such tools is essential for us to effectively navigate the market.

Could you please provide a list of the projects and their links so that we, the traders and the community, can easily access these tools?

Thanks in advance for your assistance.

Note:

For any traders interested in what we are trying to build for the community at dYdX, you can see [here](#) for [Vertex](#). It can take a minute to load due to the data size.

It shows insights into overall market shifts, which can be filtered down to specific coins or combinations of them over any timeframe or period range up to 100. It also provides a download link to generate a shareable Twitter card with the information you select to display.
