

Context

During a security review of the Aave protocol, a technical problem has been detected, affecting a small sub-set of assets under specific circumstances and configurations.

In order to be cautious and reduce any type of risk, as technical service providers of the DAO we have recommended to the Aave Guardian to temporarily halt new supplying and borrowing of WMATIC, MATICx and WAVAX, with all other functionality remaining fully operative.

To be clear, no funds are at risk and all other assets and pools are operating as always

.

Next steps

We will keep the investigation, and communicate more details to the community in due time.
