

Date: 13/12/2023

## I. Executive Summary:

### a) Roadmap Progress

- We announced the date of Perpie's public launch and have been preparing for it on all fronts
- We've finalized the design & architecture of our integration with GMXV2 into Perpie and have begun the full implementation. The next update will consist of all of the actual integration details that have been made.

### b) Milestone/KPI Achievements

- No KPIs/Milestone achievements for the integration with V2, as it was not completed yet.
- Notable that while we're still in private beta with GMXV1 integration, we've had a lot of people approach us asking for early access recently.

### c) Dune Dashboards

- We've been integrating new events into our smart wallets in order to better track our usage later on when the dune dashboards are built

## II. Current Progress:

As mentioned previously, we had been focusing on the architecture of the integration and only begun the implementation

However, these are the features we've implemented in our bot infrastructure & For GMX V1, which should all be relevant & benefit the upcoming integration with V2:

- Added simulations to execution
- Released Price Alerts feature officially - Allowing users to set alerts on prices relevant to them
- Allow users to share their closed trades - Showcasing Shareable P&L Cards On Close Position notifications
- Display the type of order that was used to close a position when notifying the user (e.g. Market, SL, TP)
- DevEx: Improved logs debugging experience
- Improved execution experience by adding more descriptive statuses
- Improved bot flows by adding easy "Retry" buttons on timeouts
- Update our infrastructure to allow for multiple use cases, preparing the ground for the Quick Trade feature that will come soon
- Allow to Long/Short a market directly from it's page by utilizing the infrastructure mentioned above - Saving the users a couple of clicks in an easy way
- Added animated tutorials to some bot features + an easy to use infrastructure for us to add more to each feature in the future
- Remove "Close All"/ "Cancel All" if no positions/orders are available. Making it more clear
- Infrastructure for us to send mass updates to all of our users - allowing for easy marketing of new features and important announcements. And also collect user's feedback
- Label unknown tokens in notifications with their correct names
- Updated the styles & stability of our native charting component, giving it a much more native and slick look
- Add a "Dismiss" button for each error that pops up on the user's end
- Create a channel for our team to monitor each notification users receive - like trader tracker but automatically tracks everyone
- Infrastructure for Galxe campaign + Galxe OAuth flow
- Finalized design & architecture of our upcoming integration with GMXV2

### III. Community Engagement:

- Teased our public launch date: <https://x.com/perpieio/status/1732399806939598963?s=20>
- Twitter following has more than quadrupled

, going from 500 to 2200!

- Telegram group members went from 200 to nearly 500
- We announced our price alerts feature which received good exposure: <https://x.com/perpieio/status/1733477163871903759?s=20>
- @Muz\_FE

wrote an amazing thread about Perpie: [https://x.com/Muz\\_FE/status/1728907707699409021?s=20](https://x.com/Muz_FE/status/1728907707699409021?s=20)

- Mentioned by The Daily Degan on substack: <https://x.com/thedailydegenhq/status/1730960759633424409?s=20>

### IV. Partnerships and Collaborations:

- Announced a partnership with Copin, for upcoming features regarding trade & pnl analytics: <https://x.com/perpieio/status/1732154285352464579?s=20>
- Announced a partnership with Enso, which we will utilize for some DeFi earning in the future: <https://x.com/perpieio/status/1732154285352464579?s=20>
